# **eSentio Technologies Launches Connected Intelligence Blueprint to Help Large Law Firms Turn Experience Data into Strategic Intelligence**

**WASHINGTON, DC, May, 2026** – eSentio Technologies, the legal technology consultancy with 25 years of experience serving AmLaw 100/200 and global law firms, today announced the expansion of its Practice Solutions offerings with the launch of its Connected Knowledge Practice. The practice helps law firms move beyond initial use cases for Litera Foundation and realize its potential as a firm-wide intelligence platform – one that is powered by a continuously enriched and connected data ecosystem.

Experience management has become one of the most consequential data challenges in large law. Firms' ability to combine explicit knowledge from systems and documents with tacit knowledge in attorneys' heads will determine how well they differentiate in a competitive market where AI is a powerful leveler. eSentio's Connected Intelligence Blueprint enables firms to automate and integrate their explicit and tacit knowledge so that Foundation becomes the central business intelligence hub benefiting multiple stakeholders in the firm.

*"Law firms have made significant investments in Foundation, but most are only scratching the surface of what it can do. Our Connected Intelligence Blueprint harnesses the power of GenAI and Agentic workflows, turning data into insights and Foundation into a mission-critical intelligence engine. This gives firms visibility of not just 'what' or 'how many' matters were executed but the harder to uncover and the very important 'why' – exposing the true value of good experience management."*

**Karen Ngo, Global Director of Practice Solutions, eSentio Technologies**

eSentio's Connected Intelligence Blueprint maps, automates and continuously enriches experience data flows across the firm's technology ecosystem. Engagements cover taxonomy design and data hygiene, IG policy alignment, integration architecture, and a change management program that ensures widespread adoption across all stakeholder groups.

*"Litera Foundation is built to be the intelligence engine of a modern law firm - but realizing that vision requires partners who understand both the technology and the strategic complexity behind it. eSentio brings a strong combination of strategic insight and technical expertise that aligns well with the needs of firms pursuing this vision. eSentio's Connected Intelligence Blueprint delivers value by connecting the explicit knowledge in firm systems with the tacit knowledge that lives with lawyers, creating a business intelligence hub that serves the whole firm"*

**Barry Solomon, VP Client Value and Innovation, Litera**

*"The firms that differentiate in an AI-driven market will be the ones that truly know themselves – their experience, their expertise and their collective intelligence. eSentio's Connected Intelligence Blueprint gives firms exactly that foundation. Their depth across Applied AI, information governance, knowledge management, and data architecture means they truly understand*

*the organizational complexity that determines whether these programs succeed.”*

**Kenneth Pechous, Global Head, Business Development & Alliances, Litera**

For law firms serious about using experience management to differentiate, eSentio's Connected Intelligence Blueprint is the only place in the market where Applied AI, information governance, knowledge management, data architecture, and in-house engineering sit under one roof - with 25 years of large law experience behind every engagement.

### **About eSentio Technologies**

Founded in 2000, eSentio Technologies is a strategic technology consultancy working exclusively with AmLaw 100/200 and global law firms. A certified Litera Foundation partner, its teams of senior consultants – each with prior experience as CTOs, CIOs, CKOs, or senior legal technology practitioners – advise across document management, knowledge and experience management, information governance, AI readiness, data architecture, cybersecurity, change management, and development and integration. eSentio maintains offices in Washington, DC and the UK.
